ABSTRACT OF THE INVENTION

Subj A building structure that consists of several individual theaters each of which has
3 three distinct levels. There is a balcony level for first class patrons with separate entrance
4 and exit areas. There is a lower viewing level for regular class patrons. The projection
5 level is for motion picture projection equipment and is located between the upper and the
6 lower viewing levels. This gives all patrons of the theater an optimal look and feel for the
7 reality of the motion picture shown on the projection screen. Additionally multiple audio
8 speakers are located throughout the theater empirically so as to eliminate sound dead
9 spots.
